We are pink verified itilv3, ISO 9001, ISO 27001, ISO 20000, ISO 15048-1 certified, and start-up India, MSME & NSIC registered. We are recognized by ET Telecom for best Security, Privacy & Authentication Driven Solution 2023

Driving Confidence in the Digital Age: With CyberSecurity

Security Operations Center refers to the physical practices and virtual technologies used to protect a data center from external threats and attacks. Data centers provide services such as data storage, backup and recovery, data management and networking.

Security Information & Event Management: tbSIEM, integrating a selection of tools designed to aid network administrators in computer security, intrusion detection and prevention. It can be used to effectively secure small to very large heterogeneous networks.

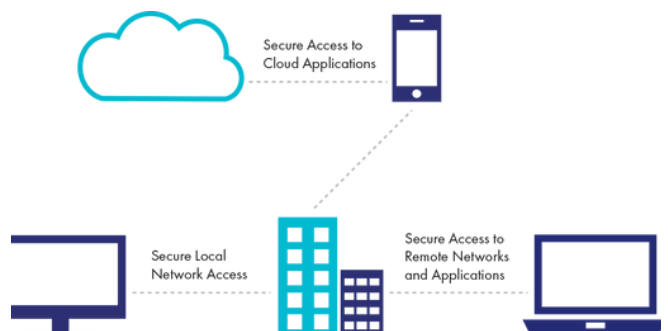

Vulnerability Assessment: tbVA is a full-featured vulnerability assessment. Its capabilities include unauthenticated testing, authenticated testing, various high-level and low-level Internet and industrial protocols, performance tuning for large-scale scans and a powerful internal programming language to implement any type of vulnerability test.

Identity and Access Management: tbIAM provides comprehensive and integrated identity governance and web access management solutions that are based on open standards and offered as professional models

Syslog: Syslog server is a logging server that allows for the centralized collection of syslog messages, known as events, from a variety of networking devices such as routers, switches, and firewalls, in addition to servers running a variety of operating systems.

Network Access Control: Boasting an impressive feature set including a captive-portal for registration and remediation, centralized wired, wireless and VPN management, industry-leading BYOD capabilities, 802.1X and RBAC support, integrated network anomaly detection with layer-2 isolation of problematic devices. It can be used to effectively secure small to very large heterogeneous networks.
