All of your remote connections at your fingertips !!

Dedicated to helping network administrators and IT executives securely manage remote connections, network accesses, passwords and credentials.

A variety of factors have converged to create the need for a robust, efficient and simplified remote connections management platform, including:

- IT departments are increasingly being asked to do more with less

- The number of servers, the size of databases and users continue to substantially increase

- IT security has emerged as a critically important organizational issue – often the most important

- Many teams are no longer co-located in the same room or even the same city, and must find better and smarter ways to work together when they're separated by time and space

Add it all up, and it's clear that in order for IT professionals and departments to achieve their objectives and stay ahead of their competition, they need a powerful, reliable and trusted business and team-based solution.

Benefits:-

- Consolidates and centralizes all your remote connections on a single platform.

- Evaluates your enterprise's level of information security with detailed reports and audit trail.

- Enables powerful role-based access controls to securely share remote connections between users in a centralized repository.

- Enhances control of access to privileged accounts and implements password management best practices.

- Enforces your organization's least-privilege strategy by provisioning password access to users.

- Eases the administrative burden by offering simple and easy management.

- Provides SMBs and IT departments with a solution that offers enterprise-grade features at a non-enterprise cost.

tbVidolyRD is a powerful, secure and low-cost cloud-based data source that empowers IT pros and network executives to save time and money, while they strengthen their workforce, increase security for sensitive data, and enjoy the rewards of being among their organization's strongest business assets. It lets you access remote connections from any Internet connection.

It delivers a unique platform that empowers you to centralize all of your remote connections via a refreshingly simple and friendly user interface. It's the elegantly efficient way to create a world in which remote connections are unified, security is strong and manageable, and teamwork is both easy to achieve and enjoyable to experience.

- Integrate all your connection types (RDP, VNC, FTP, VPN, Web, SSH, …)

- Secure, organize and store your sensitive data

- Centralize your information

- Enable teamwork and share session settings

- Manage user security rights

- Monitor, verify and analyze connection log

- Simplify user queries

- Streamline support tasks

- Save time and money

- Create an online data source and access all your remote connections from anywhere

- Share your sessions with multiple users

- **Compatibility:** All tbVidolyRD start from the one piece of source and should follow the RFB protocol for their communications. This common start point means that most of the tbVidolyRD flavors (variants) "usually" talk nicely together, allowing for easy cross platform desktop sharing to occur.

- **Encryption:** tbVidolyRD has optional DSM Encryption that secures communications between the viewer and the server, reducing the possibility for man-in-the-middle attacks that would be able to see 100% of the remote screen.

- **File Transfer:** Being able to transfer files to and from the remote computer is a very handy feature (especially when using the "Single Click" remote client module). This eliminates the need for emailing files to the client, and various other methods of file transfer.

  Complete Folders can be transferred between the viewer and server, add to this the fact that these files are compressed prior to transfer, and you get maximum flexibility with minimal bandwidth.

- **Chat:** tbVidolyRD Chat system is an embedded Text Chat with intuitive Graphical User Interface (GUI) allowing for easy and quick communication between local (viewer) and remote (server) computers.
