

tbAssetManager is a web-based ITAM tool that allows you to monitor and manage assets on your network from planning to disposal. tbAssetManager provides different ways to ensure that all assets on your network are discovered. You can manage your software and hardware assets and ensure compliance with your software licenses. It's easy to install and ready to use right out of the box.

### Seamless Asset Provisioning

When new asset requests come in, fulfillment staff can quickly check available inventory. In this way, organizations can provide faster service to frequently requested goods and also reuse returned assets.

Asset management makes it easy to create orders with just one click. The ordered assets are tracked and automatically created by the system upon receipt. Therefore, asset records are created cleanly from scratch with complete asset model, user request, order, and cost data. In addition, assets can be provisioned without administrative delay.

### Easy Service Catalog Population

Asset managers can place asset offerings straight into the service catalog. This is done without the need to build complex web pages or asks more technical group and tbAssetManager can bring in data directly from vendors. As service catalog items are published, asset managers can also decide on standard offerings and groups of users are authorized to request the asset. Internal and recurring pricing supports different chargeback models.

### Benefits:-

- Minimize Asset Life Cycle Costs
- Maximize Benefits from Assets
- Make Informed Decisions on Planning and Purchases
- Ensure Software License Compliance
- Discover and Monitor all your Assets from one place
- Know the Total Cost of Ownership of an Asset
- Increases insight into asset reliability
- Manage all IT assets
- Improve license control and auditability
- Work efficiently
- Reduce downtime
- Improve response time

## Automated Inventory Management

With tbAssetManager, customers can manage their inventory of hardware, consumables and all other types of assets. IT can define a hierarchy of physical and logical storage rooms. You can also define simple thresholds for managing inventory and taking actions when inventory levels are low for each inventory asset model.

Automated rules either withdraw inventory from the parent warehouse or process instructions to purchase more from the supplier. This allows companies to quickly provide employees with the resources they need to stay productive without spending too much inventory.

## Full Contract Management Capabilities

tbAssetManager includes contract management capabilities, with the ability to define any number of contract types and to create contracts against them. IT managers can assign contracts to team members and leverage the ServiceNow workflow engine to automate the contract approval and renewal process.

tbAssetManager tracks the key terms and conditions of contracts, makes them easily searchable, and includes document management for version control and storage of electronic documents.

**Single sign-on capabilities**, provided by LDAP/Active directory, SAML, or Google OAuth, simplify access.

## Ticketing system integration

Dynamically display the end user's hardware and software configuration in tickets or service requests sent by the end user.

**Automatic alerts** notifies you when license limits are at risk of being exceeded, assets are due for scheduled maintenance, or supplier support contracts are due for renewal.

A **dynamic data model** captures any set of asset parameters in the database. Assets can be linked to vendor support contracts, licenses, and other objects with configurable relationships.

**Graphical charts and reports** provide insight into turnaround times, staff productivity, and backlogs.

**Full auditability** provides the audit logs and history tracking that records every change made to the assets during its lifecycle.

## IT Asset Management

- Monitor complete asset life-cycle from procurement to disposal
- Automatic discovery of all hardware and software deployed in your network
- Drilldown into assets to view critical information (history, CI info, relationship, etc.)

## Remote Control

- Take control of any asset through remote access
- Perform maintenance tasks on remote systems

## Software Asset Management & License Compliance

- Stay compliant with license agreements with easy-to-understand flash cards
- Enforce peak usage limits for concurrently licensed applications
- Identify unused and under-utilized licenses

## CMDB

- View all the Configuration Items and their relationships
- Helps in root cause analysis and impact monitoring
- Close to 50 pre-defined Configuration Types available

## Reports

- Generate detailed pre-defined/custom/query reports
- Ability to schedule reports and deliver to your inbox

## Purchase Orders and Contracts

- Use purchase order workflow for ease of purchase order generation
- Define contract details, rules and attach contracts
- Notify technician prior to contract expiration

## Key Features:-

- **Single View of All Assets** - Asset Manager provides a central view of almost all IT and non-IT assets across the IT ecosystem. An integrated view of hardware and software assets enables multiple use cases across the IT portfolio and simplifies IT auditing.
- **Simplified User Interface and Reporting Widgets for ITAM Users** - Asset Manager supports a rich client interface for power users and a simplified web interface for ITAM casual users. The Out of the Box Report Widget gives ITAM or stakeholders access to the asset management information they need to make the right decisions through the Out of the Box Widget.
- **Consolidate and Streamline Procurement Processes** - Integrating requirements, avoiding single purchases, and applying purchasing policies across IT are challenges that can have a significant financial impact on revenue. The Asset Manager Procurement module addresses these challenges by automating and streamlining the entire query life cycle. Validate each request against the company's approval criteria by comparing it to a catalog of approved assets.
- **Software Asset Management** - Asset Manager is one of the leading enterprise-ready solutions for SAM, helping enterprises manage software licenses on almost any IT platform. This framework provides an end-to-end solution for discovering hardware, software, and virtualization technologies. It also provides a ready-to-use integration framework for using discovery data, allowing counters to evaluate license compliance for their respective vendor contracts.
- **Contract Management** - The Asset Manager Contract Management Module helps organizations control the number, variety, and complexity of IT asset contracts. This powerful asset management software module simplifies and automates the contract management process throughout the asset lifecycle, from query to procurement and decommissioning.
