

tbSIEM Regulatory Compliance

WHITE PAPER

Regulatory Compliance

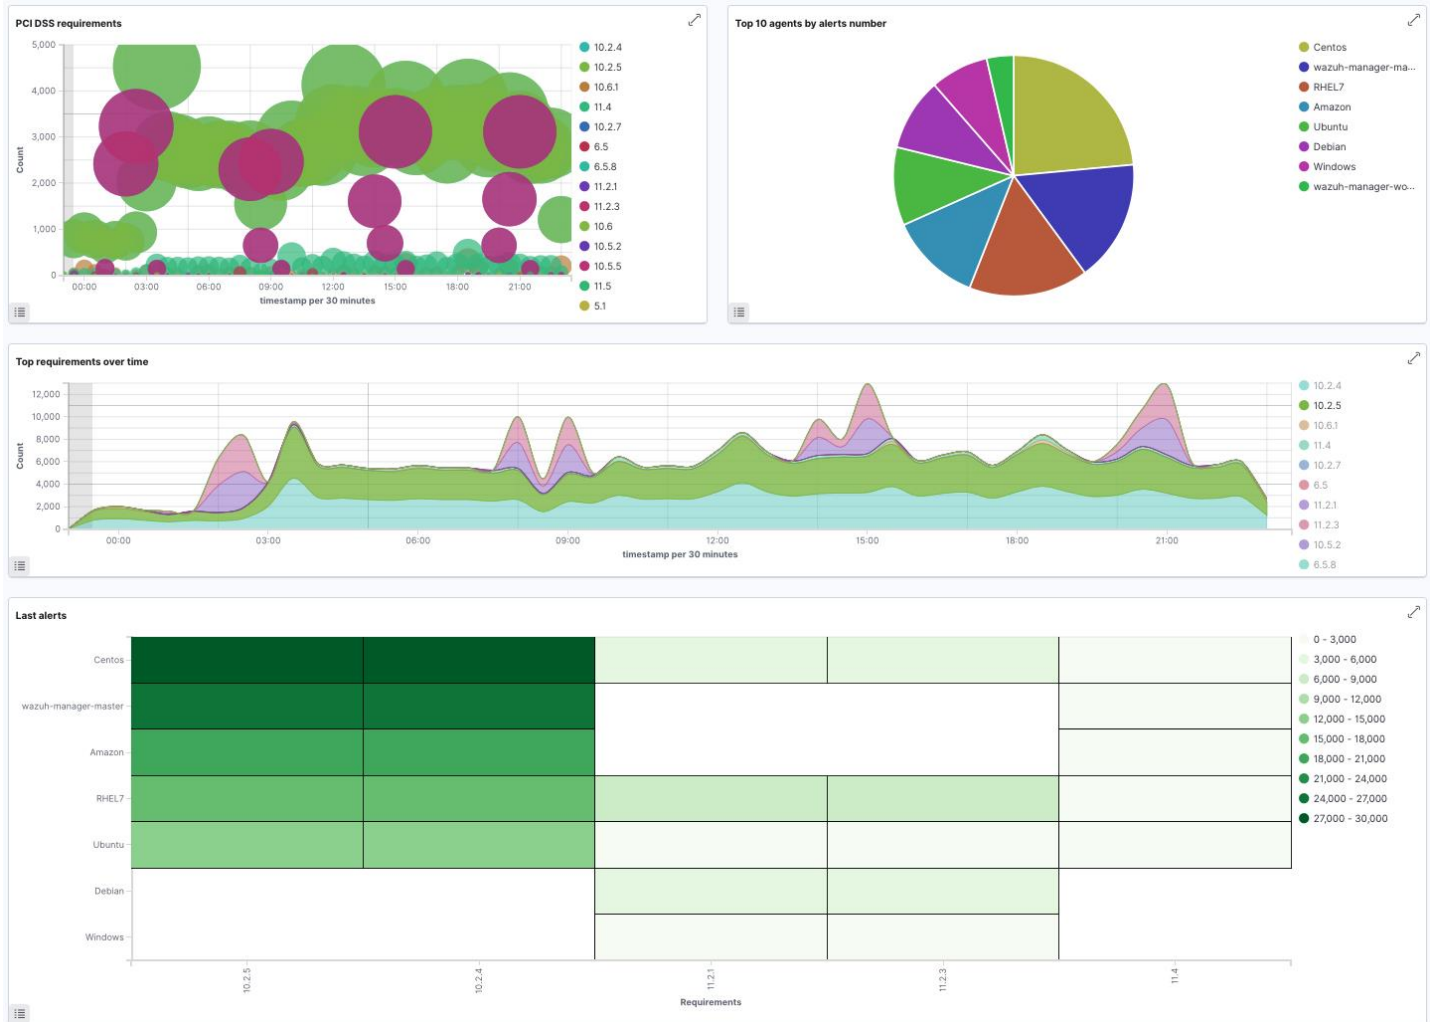

The tbSIEM platform is often used to meet the technical aspects of regulatory compliance standards. tbSIEM not only provides the necessary security controls such as intrusion detection, configuration assessment, log analysis, vulnerability detection, among others, to meet compliance requirements, but also uses its SIEM capabilities to centralize, analyze and enrich security data.

In order to provide regulatory compliance support, the tbSIEM rules have carefully been mapped against compliance requirements. This way, when an alert is generated (a rule condition has been matched), it automatically includes compliance information. Here is the list of currently supported standards:

- Payment Card Industry Data Security Standard (PCI DSS)
- General Data Protection Regulation (GDPR)
- NIST Special Publication 800-53 (NIST 800-53)
- Good Practice Guide 13 (GPG13)
- Trust Services Criteria (TSC SOC2)
- Health Insurance Portability and Accountability Act (HIPAA)

Besides, tbSIEM rules include mapping with MITRE ATT&CK framework, which is used for alerts taxonomy and to provide better security context.
