

Continuously detect and protect against attacks, anytime, anywhere.

tbVA is vulnerability Assessment tool, is comprehensive vulnerability assessment system that can detect security issues in all manner of servers and network devices.

Key Features:-

- Agent based Detection** Along with our scanners, VM also collaborates with the groundbreaking TechBridge Cloud Agents to expand its network coverage to assets that cannot be scanned. There is no need for firewall adjustments, scan windows, or all-purpose, lightweight agents because they are resident on the assets they are monitoring. Faster vulnerability discovery results in little network impact.
- Widespread exposure and visibility** – Protecting your IT assets on-site, in the cloud, and on mobile endpoints, TechBridge VM continuously checks for vulnerabilities and precisely identifies them. A summary of your security posture and access to remediation information are shown on its executive dashboard. For a variety of stakeholders, including compliance auditors, VM creates personalized, role-based reports that include automatic security documentation.
- Constant monitoring and alerts** - Teams are pro-actively warned about potential dangers when VM is used in conjunction with Continuous Monitoring (CM), allowing issues to be resolved before they result in breaches. You can customize notifications to inform you of either general changes or specific events. With CM serving as your cloud sentinel, you can see your perimeter from the perspective of a hacker.
- A perimeter-less virtual machine** - TechBridge VM provides next-generation vulnerability management for these hybrid IT systems whose conventional borders have blurred as businesses adopt cloud computing, mobility, and other disruptive technologies for digital transformation. TechBridge VM is trusted by millions of enterprises around the world due to its quick deployment, low TCO, unmatched accuracy, robust scalability, and extensibility.

Benefits:-

- **2-second visibility**
Provides you with complete transparency into the assets in your data centre, detects their vulnerabilities, establishes a priority for remediation, and evaluates IT compliance.
- **Continuous, comprehensive protection**
Analyses your environment continuously and alerts you to compromise indications and traffic abnormalities.
- **Accurate, prioritized results**
Contains a strong data analysis, correlation, and reporting engine.
- **Lower and more predictable TCO**
No need to develop or manage additional infrastructure, human resources, capital expenses, or software.
- **Sensors that provide continuous visibility**
The platform sensors are continuously active, providing you with continuous 2-second insight of all your IT assets whether they are on-premises, at endpoints, or in the cloud. The sensors are available as physical, virtual, or light-weight agents and are remotely deployable, centrally administered, and self-updating.

- **All data analyzed in real time**
You may avoid the expense and hassle of maintaining various security suppliers by using VA Tool, which offers an end-to-end solution. Provisioning extra cloud apps is as simple as clicking a box, and this automatically collects and analyses security and compliance data in a scalable, cutting-edge backend.
- **Respond to threats immediately**
There is no need to handle scanning credentials or arrange scan windows. As new vulnerabilities emerge, the Continuous Monitoring service enables you to proactively address potential threats by providing you with real-time notifications to let you know right away.
- **See the results in one place, anytime, anywhere**
Without the need for plugins, it is accessible straight in the browser. You can personalize dashboards, delve down into specifics, and generate reports for coworkers and auditors thanks to its easy single-pane-of-glass user interface, which is available across all of its products.

Network

- Compliance Testing
- Perimeter Scanning
- Configuration Monitoring

General Features:-

- Recognize security holes in any systems that are connected to the Internet.
- Comprehensive reporting for risk evaluation and remediation.
- Alerts for vulnerabilities when changes to a scheduled report are found.
- Custom scan options including Web, WordPress, Network/Server, and Joomla scans.
- Quick and simple vulnerability scans with many of user configuration options.

Performance

- Issue Tracking
- Detection Rate
- False Positives
- Automated Scans

Supported Platform

- Linux/ Unix OS
- Window OS
- VMware
- Network Device

Key Features:-

- Perform comprehensive security testing of an IP address
- Vulnerability database is updated daily
- Intelligence Scanning
- User Management
- Feed Management
- Supports Concurrent scan task
- Offers note and false positive management of the scan results
- Web User Interface

About TechBridge

TechBridge is the World's leading Product & Solutions Company. Data Center Applications, Collaboration and Real Time Communication. DC Management and Monitoring, Disaster Management, Security, Collaboration and Cloud. Its market-leading Network Modernization, Unified Communications, Mobility and Embedded Communications solutions enable customers to quickly capitalize on growing market segments and introduce differentiating products, applications and services. We are an expert and leader in Government Solutions, Smart City Solutions, Data Centers and Large Enterprises. We do custom application applications also, as per the customer requirements.
